

# UBISEED VALUE INCREASE OVERVIEW v2.1

So far: UBIseed is initiated as a digital currency. UBIseed is centrally monitored by machine intelligence for maximum security and convenience.

2018: UBIseed is granted as Unconditional Basic Income to all who sign up, with a fixed 1000 UBIseeds per month. It is easy to sign up to and use by SMS.

The initial target group for building UBIseed value is communities living at less than \$2 per day, where the initial low value of UBIseed will be significant.

We have engaged philanthropic Product Partners among telecoms to provide plans worth \$1, which will only be payable with UBIseed – initially 1000 UBIseeds equaling a month's provision. Pilot in India.

Due to the infrastructure already being in place, the plans of generally 50 minutes, 50 SMS and 50Mb data are essentially free for the telecom Product Partners to provide. Pilot in South Africa.

2019: With many poor now buying \$1 telecom products at 1000 UBIseeds per month, the value of UBIseed thus becomes de-facto \$1/1000, although since only limited telecom products can be bought, its trading value will be less than that, say \$0.5/1000. Pilot in USA.

A simple-to-use currency exchange is added to UBIseed services in cooperation with forex partners, allowing trade through calls, SMS and web interface to the IBM Watson service, for exchanging UBIseeds to fiat currency such as USD which is then handed out in the nearest forex partner shop.

The UBIseed service on call, SMS or PC will guide and require sellers to ensure a slowly rising price of UBIseed, creating artificial scarcity in an otherwise infinite currency.

Product Partners can exchange their UBIseeds from telecom products for fiat cash such as USD, meaning they have earned on previously unavailable customers.

Holders will want to keep the UBIseeds longer because they can now see the price rising, making their accumulated UBIseeds worth more over time.

With this as argument, the Product Partners are now convinced to half the price to 500 UBIseeds or double the plans they provide.

2019 late: The doubling of the plans or cutting of price means that the de-facto value of a UBIseed is now \$1/500 and a month's provision of 1000 UBIseeds thus has a value of \$2 in fiat currency.

2020: Even single and unconnected poor are now able to afford some telecom service and some basic food, water and shelter for their monthly provision of UBIseeds, increasing the trade and thus increasing the trading value of UBIseed further to \$1/250.

This price jump, and a growing user base numbering millions, will interest currency speculators. And with the internal exchange control constantly ensuring rising prices, the value of UBIseed will now grow steadily.

2021: With more value comes more Product Partners, also outside telecom. With that extra utility, the user numbers increase and with those the price of UBIseed on the tightly controlled exchange market.

When the value rises above \$10 for a month's provision of 1000 UBIseeds, at the exchange rate of \$1/100 per UBIseed, the 50% of the world living at less than \$10 per month will also be interested.

This great increase in users and utility further accelerates the value increases of UBIseed.
